Seedling Vigor	6
Drought Tolerance	8
Test Weight	9

86P23 is an excellent full season hybrid for North Missouri. Great stalks and anthracnose scores allow this full season hybrid plenty of time to dry down without worry of stalk lodging. Be careful not to overload trucks because we have seen test weights as high as 63lbs with this hybrid.

This hybrid has great ear flex with 18 and 20 rows common. We recommend lower populations for this hybrid compared to some because it will flex its length more than most hybrids.

86P23 can go across highly productive soils to more stress prone soils. In 2 years of head to head comparisons in North Missouri it was only 2.5 bushels behind ProHarvest 8360. In the 2021 FIRST trials 86P23 was #1 of 48 full season hybrids in the Southern Illinois Region.
